## ABSTRACT

~~The invention relates to a~~ A production process for boards (9b,11), based on a hydraulic binder such as plaster, having thinned edges (10). This process is ~~characterized in that it comprises~~ includes, before the passage into the die (4, 403), the extraction of a lath (6, 23) from a lath magazine (20) and the introduction of this lath (6, 23) under the facing material (1) of the board. ~~The invention also relates to a~~ A production line for such boards (9b,11) as well as a device for the introduction of laths (6, 23) under the facing material (1).

(Fig. 1)

## **ABSTRACT**

A production process for boards (9b,11), based on a hydraulic binder such as plaster, having thinned edges (10). This process, before the passage into the die (4, 403), the extraction of a lath (6, 23) from a lath magazine (20) and the introduction of this lath (6, 23) under the facing material (1) of the board. A production line for such boards (9b,11) as well as a device for the introduction of laths (6, 23) under the facing material (1).
